

DEEP-TECH EDUCATION · DRESDEN

A personal science tutor for every student who doesn't have one.

Pradeep Nagapuri — Graduate, Dresden International University (2026)

Deep-tech education startup · built in Dresden, Germany

APPLYING FOR EXIST-GRÜNDERSTIPENDIUM

Understanding science shouldn't depend on affording a great teacher.

- ◆ A great personal tutor is the biggest advantage in learning — and the rarest
- ◆ Video and text don't make abstract concepts **click**
- ◆ Students memorise formulas; **misconceptions go uncorrected**
- ◆ 1-to-1 tutoring is expensive and **doesn't scale**

THE SOLUTION

We make the concept *move*.

- ◆ Physics-accurate, **interactive simulations**
- ◆ An **AI professor** that explains and drives the simulation live, by voice
- ◆ “ChatGPT *tells* you — PhysicsMind *shows* you”

► **Insert a live simulation screenshot here**
— e.g. the Lorentz-force sim. (In the meeting, open the real sim on your laptop.)

WHY IT'S DIFFERENT

Not another tutoring app — a deep-tech engine.

- ◆ Physics engines compute everything; the AI writes only **configuration, never the physics** → always accurate
- ◆ A **curriculum-specific simulation library** — our core IP
- ◆ A proprietary **data flywheel**: every student doubt improves the next explanation

Defensible technology + knowledge — not a feature a competitor can copy.

PRODUCT · B2C

Direct-to-student subscription.

- ◆ Students **subscribe directly** — web app + AI voice professor
- ◆ Tiered: simulations → AI doubt-solving → voice professor
- ◆ **Concept clarity first**; exam depth grows with the student

No dependence on schools or institutions.

A focused entry into a global market.

- ◆ Global STEM learning — underserved by **simulation-first** products
- ◆ Build on the **Indian curriculum** (deepest → ports to AP / A-level / IB)
- ◆ First revenue: **UAE diaspora** — same curriculum, high willingness to pay
- ◆ Year 2: India scale + Western curricula

Already building. Already validated by a teacher.

- ◆ **Gold-standard simulations**
built — magnetism &
electrostatics
- ◆ Working **AI authoring**
pipeline + AI voice-professor
prototype
- ◆ A **teacher co-development**
partner reviewing real lessons
- ◆ Built solo, from Germany, with
AI-assisted development

✓ **TEACHER-VERIFIED**

Pre-revenue today — a teacher-supervised student pilot is the next step.

EXIST · THE ASK

What the stipend makes possible.

THE 12-MONTH PLAN

- ◆ Build the concept library to depth
- ◆ Run a teacher + student pilot
- ◆ Reach first paying users
- ◆ Build a German-based deep-tech company

MY QUESTIONS FOR YOU

- ◆ Eligibility (DIU graduate, 2026)
- ◆ Team requirement
- ◆ Professor / mentor
- ◆ Visa pathway (\$20 → \$21)
- ◆ Next steps & timeline
